AB PURPOSE: To increase safety when cipher is carried out with a password as
a key by providing a different key to a person individually.

CONSTITUTION: A card is put into a reader 13 to read a cipher recorded on
the card. The cipher are fed to a register 14. Then an operator feeds a
password through a keyboard 1. The keyboard input performs the cipher with
the ***password*** ***used*** as a ***key***. Thus a cipher
sentence is produced and fed to a register 15. A comparator 16 compares
the contents of the register 14 with those of the register 15. When the
coincidence is obtained from this comparison, the confirmation of the
corresponding person is possible and displayed at a display part 17.
